

REMARKS

Favorable consideration of this Application as presently amended and in light of the following discussion is respectfully requested.

After entry of the foregoing amendment, Claims 1-9 are pending in the present Application. Claims 1-5 have been amended. Support for the amendment of Claims 1-5 can be found at least at the paragraph bridging pages 8-9 of the specification. New Claims 6-9 have been added and find support at least at pages 9-10 of the specification. No new matter has been added.

By way of summary, the Official Action presents the following issue: Claims 1-5 stand rejected under 35 U.S.C. § 103 as being unpatentable over Dworkin (U.S. Patent Application Publication No. 2002/0071,540), in view of Dailey et al. (U.S. Patent No. 6,363,352, hereinafter "Dailey").

REJECTION UNDER 35 U.S.C. § 103

The Official Action has rejected Claims 1-5 under 35 U.S.C. § 103 as being anticipated by Dworkin in view of Dailey. The Official Action states that Dworkin discloses all of the Applicants' claim limitations with the exception of sending a content to a server for distribution. The Official Action cites Dailey as disclosing this more detailed aspect of the Applicants' advancements, and states that it would have been obvious to one of ordinary skill in the art at the time the advancement was made to combine the cited references to arrive at the Applicants' claims. Applicants respectfully traverse the rejection.

Claim 1 recites, *inter alia*, an information processing apparatus, including:

... a generation unit configured to generate a group chat room corresponding to the reservation at a predetermined time prior to a distribution start time designated by the reservation; and

a providing unit configured to provide the group chat room to the first terminal and the plurality of second terminals coincident with the first service,

the plurality of second terminals accessing the group chat room and first service in accordance with authentication data of the received distribution notice upon a first contact with the server (emphasis added).

Dworkin describes an application service provider environment for providing a distributed conferencing configuration. As shown in Fig. 1 of this reference, the configuration (99) includes a plurality of users (100A-100F) employing the Internet (104). Conferencing resources (112) include both hardware and software components, and, are hosted and managed by a conferencing application service provider (110).<sup>1</sup>

In operation, the users (100) may employ the services of the conferencing configuration to facilitate distribution of data and video conferencing without the expense and overhead associated with owning and maintaining their own conference resources. For example, an individual user (100A) would register with the application service provider (ASP) and be provided with an application program interface (API) to receive the necessary software for support facilitating communication with the provider. Likewise, the user may use third-party instant messaging software to communicate with other users. In addition, the ASP may employ a messaging utility (122), such that upon registration, a user may download an instant messaging plug-in for use with a user interface (100B). In this way, the user can initiate a conference by inviting other instant messaging participants registered with the ASP.<sup>2</sup>

Conversely, in an exemplary embodiment of Applicants' invention, a live distribution service for streaming contents to users is provided in accordance with a reservation made in advance by a first terminal. In operation, a personal computer (3), provides contents for distribution according to a reservation to a streaming server (5). Second terminals (4-1 - 4-3) receive the streaming contents from the streaming server according to the reservation made

---

<sup>1</sup> Dworkin at paragraph 14.

<sup>2</sup> Dworkin at paragraphs 16-17.

by the personal computer (3).<sup>3</sup> Coincident with the delivery of the streaming content, a group chat room is created corresponding to the reservation of the streaming distribution. In this way, the chat room is automatically generated to be coincident with the delivery of the streaming content. For example, distribution notices are provided to second terminals in accordance with a reservation, so that terminals included in the reservation can receive information for accessing the streaming content and chat room upon a first contact with the server.

As Dworkin describes only supporting third-party instant messaging services and providing an instant messaging plug-in to users. The user of third-party messaging utilities would not create a single group chat room. Separate conversations would be conducted between attendees having dissimilar chat utilities. As such, there is no way to create a chat room coincident with the reservation as recited in amended Claim 1. As Daily does not remedy the deficiency discussed above, Applicants respectfully submit that Claims 1-5, which recite substantially similar limitations to those discussed above, patently define over the cited art; and, Applicants respectfully request that the rejection of Claims 1-5 under 35 U.S.C. § 103 be withdrawn.

#### NEW CLAIMS

New Claims 6-9 recite more detailed aspects of the Applicants' claimed advancements which are neither disclosed nor suggested by the art of record; namely, recording the contents of the chat room in association with a profile of the first terminal.

---

<sup>3</sup> Application at page 8.

CONCLUSION

Consequently, in view of the foregoing amendment and remarks, it is respectfully submitted that the present Application, including Claims 1-9, is patentably distinguished over the prior art, in condition for allowance, and such action is respectfully requested at an early date.

Respectfully submitted,

OBLON, SPIVAK, McCLELLAND,  
MAIER & NEUSTADT, P.C.
